## SuiteLinq opts for KeyLink Solutions business center services

• 23 Feb 2010

SuiteLinq Inc., a provider of multiplatform interactive and entertainment solutions for hospitality and extended-stay environments, announced that it has chosen KeyLink Solutions, a provider of 24/7 automated business centers, lobby PCs and kiosk workstation solutions, as their exclusive partner in delivering innovative and cutting edge business services to their clients.

KeyLink's user-friendly security software, custom design center and high level of personalized 24/7 guest and staff support will enable SuiteLinq to provide a complete and efficient business center facility in addition to their existing array of in-room and on-site interactive services custom designed to meet the needs of hotel guests, according to a company release. Hotels have the option to provide guests with free or pay-per-use computers with Internet access, Microsoft Office software, airline boarding pass printing services and more, all designed to equip modern travelers with a mobile office away from home.

"I'm excited to have SuiteLinq as our new alliance partner so that we can utilize both companies' complementary products and service to better service our clients," said KeyLink president and CEO Robert Basulto.

"We know that modern hotel guests expect to have a wide variety of digital amenities available to them during their stay or even if they are just passing through the lobby," said SuiteLinq CEO Joseph Mustilli. "SuiteLinq has provided these innovative services in-room for some time and now we can deliver the same quality amenity in the business center with KeyLink. They have transformed and improved the business center experience as dramatically as we have in the guest room, so our alliance makes sense on many levels."
